

EXPERIENTIAL WORKSHOPS · APPLIED IMPROVISATION

Teams don't rise to the occasion. They fall to their level of *rehearsal*.

Unscripted Labs designs experiential "Labs" that use applied improv to build the human skills strategy depends on — **communication under pressure, adaptability, presence, psychological safety, and trust**. Fun first. Real behavioral work underneath. People leave saying two things: "I can't believe how much we laughed," and "I can't believe how much we got done."

Led by Shalini Haridoss — an improviser, applied-improv facilitator, and Certified Fraud Examiner with a risk-management background. A Toastmasters public speaker and bilingual comedian, she runs monthly public Labs and facilitates for corporate teams and kids alike — the rare facilitator even the most skeptical room will trust with the word "improv."

WHAT A LAB BUILDS

- **Clear, calm thinking under pressure** — less freezing, rambling, and deferring.
- **Reading the room before solving it** — noticing the offer, the mood, the unsaid.
- **Building on ideas, not defending your own** — "yes-and" over "yes-but."
- **Recovering from mistakes** without losing the room — or yourself.

INSIDE A LAB

- A **laughter-first sequence** that moves a guarded group to generative in minutes.
- Quick, low-stakes reps — **voice-controlled, no performing, no spotlight**.
- Every exercise **"translated to Tuesday"** so the skill lands in real work.
- Formats from **15-minute energizers to full-day offsites** — in-person or virtual.

WHAT THE ROOM SAYS

"I expected a lecture we'd forget the moment it ended. Instead it was genuinely memorable — I learned so much and actually enjoyed myself."

JESUS M.
Finance Controller

"I thought it would be another mundane training. It was so much more — I walked away with confidence, patience, and a whole new perspective."

SARAH B.
Entrepreneur

"Unlike any training I've attended. I started viewing some teammates (whom I do not want to mention!) differently after solving problems with them in a humane way."

JIGNA P.
Technology Architecture Lead
